
XELOR

Intelligence for
every part of the factory.

BY AIKYANTRA

THE SOLUTION PORTFOLIO

Three ways to move manufacturing forward.

Build a shared operating foundation, add intelligence to the systems you already use, or connect purchasing to a wider supplier network.

AI-powered ERP

A shared system for orders, engineering, buying, stock, production, quality, audit, finance and people.

01 / ONYX

For factories building or consolidating their core operating system.

Intelligence over existing systems

Connect scattered records, assess delivery commitments and compare recovery options without replacing the system of record.

02 / XELOR

For factories already using an ERP, accounting tools or spreadsheets.

Supplier network

Publish buying requirements, invite suppliers, collect quotations and compare delivery promises with total landed cost.

03 / SOURCE

For purchasing teams that need more options and a clearer buying process.

START WITH ONE. CONNECT ALL THREE.

The integrated AIKYANTRA workspace brings these three solutions together around shared business records and governed workflows.

01 / AI-POWERED ERP - ONYX

One ERP. Every department connected.

Give teams one dependable operating record, from quotation to delivery and from purchase to payment. Built-in intelligence helps identify exceptions and prepare the next action.

A SHARED FOUNDATION FOR THE WHOLE FACTORY

Sales & service

Customers, quotations, orders, delivery commitments, service and warranty.

Engineering & planning

Items, bills of material, demand, material planning and schedules.

Purchasing & stores

Vendors, RFQs, purchase orders, receipts, stock and reservations.

Production & upkeep

Work orders, material usage, machine history, preventive maintenance and downtime.

Finance & people

Accounts, receipts, expenses, attendance, leave and payroll.

Administration

Company structure, department ownership, access permissions and integrations.

QUALITY, AUDIT & ACCOUNTABILITY

Audit is part of daily work.

Capture evidence

Link inspections, quality findings and supporting records to the work that created them.

Preserve accountability

Track changes and approvals with clear permissions and a verifiable audit trail.

Close the loop

Assign corrective actions, retain completion evidence and verify effectiveness before closure.

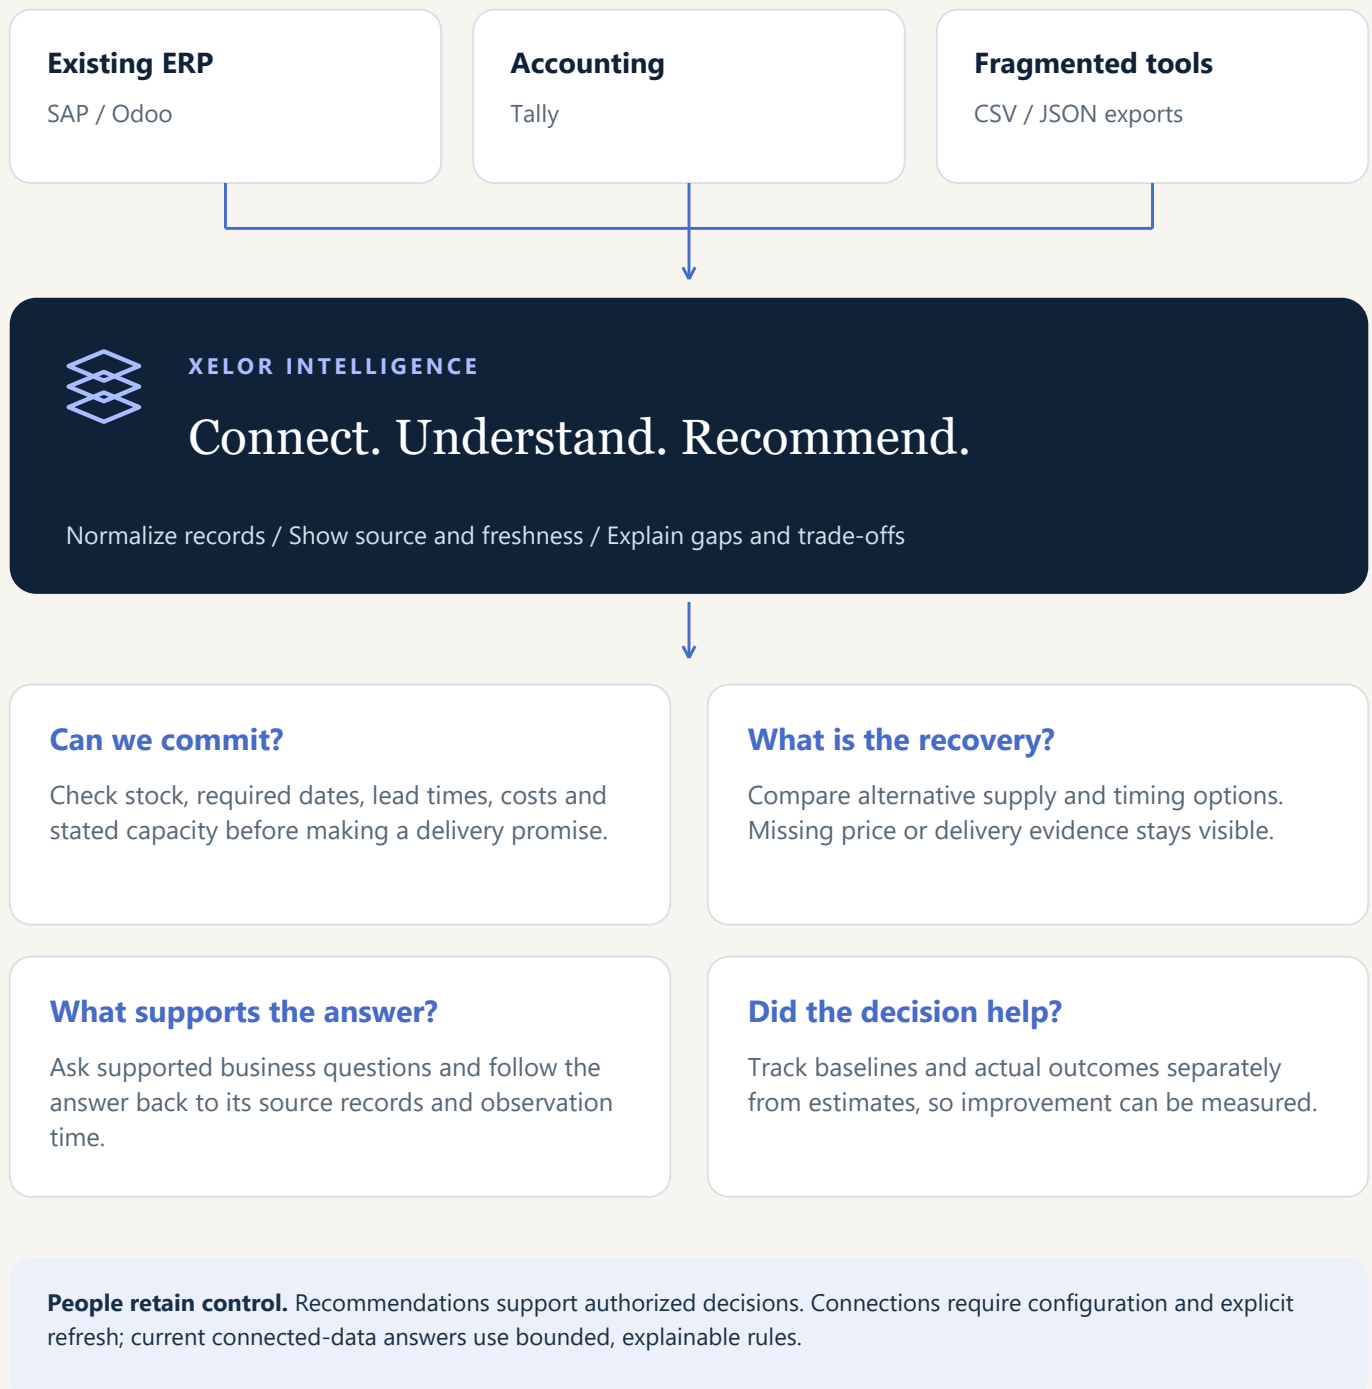

FROM A SIGNAL TO AN APPROVED ACTION

Spot a shortage or deviation, review the evidence, assign responsibility and approve the response. Records stay connected for internal, customer and quality audit review.

02 / INTELLIGENCE LAYER - XELOR

Keep your systems. Gain a clearer decision.

Bring order, inventory and supplier evidence together from supported connections and structured files. The existing ERP remains the system of record.

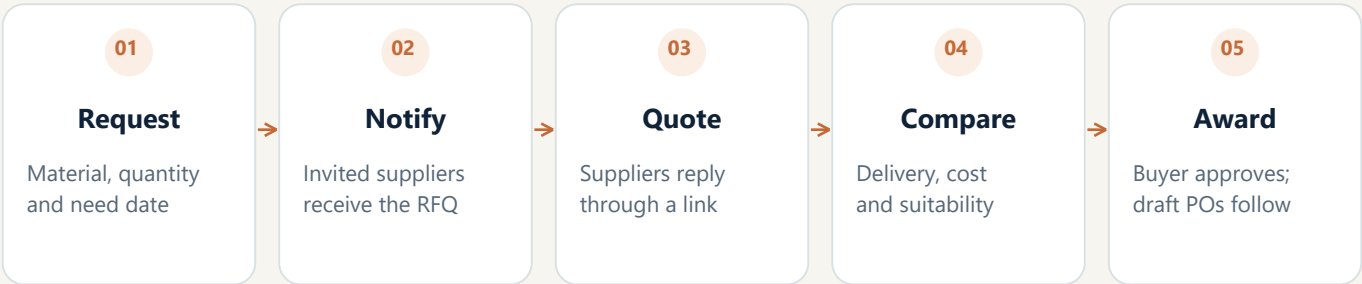

03 / SUPPLIER NETWORK - SOURCE

Better supply starts with a clearer request.

A factory publishes what it needs, invites the suppliers allowed to respond and receives quotations in one place. Compare timing and total cost before committing to a purchase.

FROM REQUIREMENT TO PURCHASE ORDER

TIME OR COST? MAKE THE TRADE-OFF VISIBLE.

Illustrative requirement: delivery within 8 days

SUPPLIER	LANDED COST	DELIVERY	WHAT IT MEANS
A	₹1,02,000	4 days	Earliest arrival
B	₹95,000	7 days	Lower eligible cost
C	₹89,000	12 days	Misses the date

- Reach relevant suppliers**
Scope invitations by access and suitability. Suppliers can answer through controlled links without an ERP account.
- Compare more than price**
Include freight and landed charges, promised dates, minimum quantities and technical approval. Unsuitable offers are flagged.
- Keep the award accountable**
Ranking supports time and cost priorities. An authorized buyer records the award; linked draft purchase orders follow existing approval controls.

Current prototype: quotation ranking uses transparent scoring rules. Email/WhatsApp invitations are previewed until live delivery is configured. AI assistance supports the buyer; it does not award autonomously.
