

RASP

Finance & Working Capital

The money and people-impact specialist. Explains the accounting truth, cash pressure, collections, expenditure and payroll consequences behind an operating decision.

Made for: product, engineering, operations and business teams.
Reading time: about 12 minutes.
Truth standard: describes the repository as implemented on 1 August 2026.

RASP

What RASP is here to do

A role, not an all-powerful chatbot

In one sentence

Explains the accounting truth, cash pressure, collections, expenditure and payroll consequences behind an operating decision.

4

product areas grouped here

6

registered callable tools

5

allowed capability prefixes

0

agents it may delegate to

Receives

Ledger and receivable records · Orders, purchasing and inventory pressure · Budget/spend commitments · Payroll and statutory outcomes

Produces

Accounting and cash evidence · Scenario—not prediction—results · Collection priority · Reviewable funding draft or finance work item

Allowed capability families

accounts.*

finance.*

expenditure.*

hrm.*

agent.*

The key distinction

The product-area grouping below shows where RASP contributes across XELOR. The callable-tool table later shows the smaller, exact surface Agent OS can invoke today. Product ownership does not automatically create runtime authority.

The business areas under RASP

Business ownership is broader than today's Agent OS tools

Accounts

Append-only journals, general ledger, receivables, settlements and period control.

Working Capital

Cash position, forecast simulation, collection priorities and reviewable funding-pack drafts.

Employee Spend

Budgets, reservations, claims, advances, GST/TDS checks and posting instructions.

People / HRM

Attendance, wages, payroll, statutory calculation and accounting handoff.

How to read this grouping

RASP is the named specialist when a mission needs facts or analysis from these areas. Each module still owns its own rules, records and write paths. The agent coordinates through registered services; it does not become the database owner.

What remains true underneath

- Each module keeps its own business rules and permissions.
- Cross-module work passes through narrow ports or registered capabilities.
- Tenant isolation, audit and workflow apply regardless of which agent is speaking.
- A readable agent answer never replaces the source record.

How RASP participates in a mission

The mission engine controls order, parallel work and recovery

1 · Scope

ONYX turns the goal into a versioned graph run with a fixed tenant, user, limits and expected outputs.

2 · Authorise

The capability registry checks that RASP is allowed to call the named tool; RBAC repeats the user permission check.

3 · Execute safely

The registered domain service performs the operation. The agent never receives a general SQL doorway.

4 · Preserve evidence

Inputs, outputs, node events and checkpoints are stored so the mission can be explained or recovered.

Delegation

RASP is a specialist and does not delegate to other agents in the current registry.

What RASP can call today

Every row is explicitly registered and permission-checked

Capability key	Mode	Result	User permission	Approval?
accounts.vouchers.read	Read	Accounting vouchers	accounts.ledger.read	No
finance.cash-position.read	Read	Cash position	accounts.ledger.read	No
finance.forecast.simulate	Simulate	Cash forecast	accounts.ledger.read	No
finance.collections.prioritise	Analyse	Collection queue	accounts.ledger.read	No
finance.funding-pack.draft	Draft	Funding pack	accounts.ledger.read	No
agent.action.dispatch	Execute	Governed work item	agentos.run.operate	Yes

What “dispatch” means

If listed, `agent.action.dispatch` appends a governed work item for a named specialist. It does not directly change a sales order, stock balance, production order, journal, payment or customer message.

Read / analyse / simulate

Returns evidence or a reproducible view. No business record is changed.

Draft

Creates reviewable proposed content. A draft is never labelled as an approved or completed business outcome.

Execute

Effectful at the Agent OS level and therefore requires an approved ancestor node.

Permission

The agent's allow-list and the signed-in user's RBAC must both allow the call.

Who RASP works with

Specialists exchange evidence through ONYX, not hidden side conversations

MICA

Connects customer commitments with credit, invoices and collections.

SPAR + AXLE + KILN

Shows the cash effect of supply, planning and plant choices.

HEXA

Uses approval and separation-of-duties controls for sensitive money work.

A complete controlled mission

Why this structure matters

Each agent stays accountable for its own facts. ONYX combines them, HEXA checks control evidence, and a person controls the decision boundary. This prevents one fluent answer from quietly becoming authority over the whole company.

What is the cash impact of this operating plan?

A realistic presentation path from question to controlled outcome

1

RASP reads ledger-backed cash and voucher evidence, then can run a clearly labelled forecast simulation using stated assumptions.

2

It prioritises collections using reproducible facts and can draft a funding pack. Drafts and scenarios are never presented as booked accounting truth.

3

Any follow-up dispatch remains an approved work item; journal posting, payment and payroll stay inside their controlled module workflows.

What the presenter should say

“RASP contributes verified domain evidence, with source references and limitations. It does not claim that a proposed or dispatched action is complete until the controlled system records and verifies the outcome.”

Useful questions to ask during the demo

- Which source records support RASP's answer?
- What permission was checked?
- Is this a fact, a simulation, a draft or a completed result?
- Would this step wait for human approval?
- What happens if a node times out or the service restarts?

How RASP stays trustworthy

Controls are enforced in the runtime and modules, not left to prompt wording

Control 1

Journals are balanced, append-only and reversed rather than edited

Control 2

Closed periods are respected

Control 3

Budget availability includes committed and in-approval money

Control 4

Statutory rate rows are effective-dated and retained

Identity boundary

Verified user + tenant

Authority boundary

Agent allow-list + user RBAC

Action boundary

Approval ancestry for side effects

Data boundary

Domain service + tenant-fenced database

Evidence boundary

Append-only run, event and audit records

What is live—and what is not

This page prevents the demo from overclaiming

Live in the repository

- Voucher and cash reads
- Forecast simulation
- Collections prioritisation
- Funding-pack drafting
- Ledger/spend/payroll foundations

Deliberate current limits

- A simulation is not a forecast guarantee
- Funding packs require finance review
- No autonomous posting, payment, collection contact or payroll release

Runtime disclosure

Orchestration, ERP reads, approval gates and governed action dispatch are live. Language reasoning is deterministic; no external model API or connector is active.

Primary implementation references

`apps/api/src/modules/accounts/`

`apps/api/src/modules/expenditure/`

`apps/api/src/modules/hrm/`

This guide is a plain-language operating map, not an API contract. The code, migrations and automated tests remain the binding technical source.

RASP in one page

Use this page when explaining the agent to a new team member

Job

Explains the accounting truth, cash pressure, collections, expenditure and payroll consequences behind an operating decision.

Owns

Accounts, Working Capital, Employee Spend, People / HRM

Receives

Ledger and receivable records · Orders, purchasing and inventory pressure · Budget/spend commitments · Payroll and statutory outcomes

Returns

Accounting and cash evidence · Scenario—not prediction—results · Collection priority · Reviewable funding draft or finance work item

Can call

accounts.vouchers.read, finance.cash-position.read, finance.forecast.simulate, finance.collections.prioritise, finance.funding-pack.draft, agent.action.dispatch

Cannot do

A simulation is not a forecast guarantee · Funding packs require finance review · No autonomous posting, payment, collection contact or payroll release

Plain-language glossary

Agent	A named specialist role with an allow-listed set of tools—not a free-roaming process.
Capability	One registered operation with an input, output, owner, mode and required permission.
Graph	A versioned mission recipe showing order, parallel steps, joins and approvals.
Checkpoint	A stored progress snapshot used for explanation and safe recovery.
Governed work item	An append-only assignment created after approval; it is not the final business mutation.
